

## Workshop: API Endpoint-testning of Mataffären

**Repo:** [GitHub - DevAnamTales/endpoint-testning-mataffaren](https://github.com/DevAnamTales/endpoint-testning-mataffaren)

This workshop was centered on testing the REST API for the "Mataffären" application. In this workshop, we utilized Postman and Newman to automate testing and validate various functionalities of the application's REST API. We focused on creating and running test collections in Postman.
