

Workshop: Artillery + Playwright (Mataffären)

Repo: [DevAnamTales/API_Testing_Artillery_Playwright](https://github.com/DevAnamTales/API_Testing_Artillery_Playwright)

This workshop focuses on conducting realistic load testing for the *Mataffären* web application using a combination of Artillery and Playwright. Initially, Artillery was used for basic tests, which only measured the loading of the `index.html` file without considering JavaScript, CSS, or critical interactions such as API calls. The goal is to enhance these tests by integrating Playwright with Artillery to simulate real user interactions, delivering more accurate and comprehensive results.
